

POLYSORBATE 60

Polysorbates are a class of emulsifiers used in some pharmaceuticals and food preparation. They are often used in cosmetics to solubilize essential oils into water-based products. Polysorbates are oil liquids derived from PEG-ylated sorbitan (a derivative of sorbitol) esterified with fatty acids. Surfacants that are esters of plain (non-PEG-ylated) sorbitan with fatty acids are usually referred to by the name Span.

| Chemical and Physical Data | |
|----------------------------|------------------|
| Solubility | (25 C)soluble |
| Density | 1.1 g/cm3 (20 C) |
| pH value | (H2O) neutral |
| Boiling point | > 100 C |
| Vapor Pressure | < - 10hPa (20 C) |
| Flash Point | 149 C |
